

Suresh Deora

Cyber Security Practitioner

+91-8955248104 | sdesureshdeora@gmail.com | [LinkedIn](#) | [GitHub](#) | Jodhpur, India

Summary

RHCE & RHCSA certified Cybersecurity Practitioner specializing in Linux Infrastructure Engineering, Security Automation, and AI-driven tooling. Proven track record of developing automated server hardening frameworks via Ansible and building machine-learning-based detection engines. Adept at bridging the gap between software development and secure systems engineering.

Certifications

Red Hat Certified Engineer (RHCE) Red Hat Verify	Apr 2026
Red Hat Certified System Administrator (RHCSA) Red Hat Verify	Jul 2025
Cyber Security 101 TryHackMe Verify	

Skills

Technologies: Linux, Ansible, RHCSA, RHCE, Docker, Java, Python, Bash Scripting, Git & GitHub

Projects

Web-Check AI Security Assessor Python , LangGraph , OpenAI API , Docker , OSINT GitHub
- Extended the open-source Web-Check OSINT tool (22k+ GitHub stars) with an AI-powered security assessment engine that automatically interprets scan results and generates remediation recommendations - Built a LangGraph-based agent that analyzes DNS, SSL/TLS, HTTP headers, open ports, and tech stack data to identify misconfigurations and rate overall security posture - Automated vulnerability interpretation that would typically require manual analyst review, reducing assessment time from hours to minutes
Malicious Bash Command Detector Python , scikit-learn , TF-IDF , Random Forest , Pandas GitHub
- Developed a machine learning classifier to detect malicious bash commands by analyzing command syntax patterns with TF-IDF vectorization and Random Forest classification - Trained the model on a labeled dataset of 64 bash commands across 7 categories to identify potentially harmful shell activity
Linux Security Hardening with Ansible RHEL 9 , Ansible , CIS Benchmarks , SELinux , auditd , SSH GitHub
- Developed Ansible playbooks to automate CIS Benchmark hardening on RHEL servers, covering SSH security, SELinux enforcement, firewall rules, audit logging, and service minimization, configured Fail2Ban - Reduced manual hardening time from 4 hours to 15 minutes per server

Experience

Linux Systems & Automation Engineer (Apprentice) R-CAT (Rajasthan Center of Advanced Technology)	Feb 2026 – Apr 2026 Jodhpur, India
- Formally trained in enterprise infrastructure automation, designing and optimizing complex Ansible playbooks across multi-node topologies - Conducted simulated system failovers, configured highly available services, and managed network storage protocols under strict enterprise constraints to clear the rigorous RHCE validation exam	
Linux Systems Infrastructure (Apprentice) R-CAT (Rajasthan Center of Advanced Technology)	Mar 2025 – May 2025 Jodhpur, India
- Managed multi-user environments, permission schemas, core networking configurations, and package management systems across active Red Hat Enterprise Linux nodes - Audited system logs and systemd processes to troubleshoot system faults and ensure system uptime	

Education

Jai Narain Vyas University	Jodhpur, India
Bachelor of Computer Application (BCA) – Information Technology	2022 – 2025
Govt Senior Secondary School Bhopalgarh	Jodhpur, India
XII (RBSE) – Science	2021
Adarsha Vidhya Mandir Bhopalgarh	Jodhpur, India
X (RBSE)	2019
